Disclaimer

This manual describes the use of the MOSPI API platform for accessing Index of Industrial Production data. The document explains the steps for registration, login, and API execution through Postman. Efforts were taken to present the processes clearly for users. If any issues are noticed, they may be reported to the concerned division of MoSPI. Updated versions will be released after reviewing user feedback.

Table Of Contents

1. Introduction 2
    1.1 Using Postman 3
        1.1.1 Downloading Postman 3
        1.1.2 Opening Postman 3
        1.1.3 Adding a Request 3
        1.1.4 Selecting Method 3
        1.1.5 Signup API 4
            1.1.5.1 Change Method to POST 4
            1.1.5.2 Enter Signup URL 4
            1.1.5.3 Select Body and JSON 4
            1.1.5.4 Enter User Details 4

    2.1 Getting Access Token 5
    2.2 Adding Login URL 5
    2.3 Selecting Body and JSON 5
    2.4 Entering Login Credentials 5

3. Accessing IIP Annual Index and Growth Rate 6
    3.1 Steps in Postman 6
        3.1.1 Calling Annual IIP API 6
            3.1.1.1 Select GET and Enter URL 6
            3.1.1.2 Add Authorization Token 6
            3.1.1.3 Fetching Full Data 6
            3.1.1.4 Adding Query Parameters 7

4. Accessing IIP Monthly Index and Growth Rate 8
    4.1 Steps in Postman 8
        4.1.1 Select GET and Enter URL 8
        4.1.2 Add Authorization Token 8
        4.1.3 Fetching Full Data 8
        4.1.4 Adding Query Parameters 9

Abbreviations

MoSPI – Ministry of Statistics and Programme Implementation
DIID – Data Informatics and Innovation Division
IIP – Index of Industrial Production
API – Application Programming Interface
CSV – Comma Separated Values
JSON – JavaScript Object Notation
URI – Uniform Resource Identifier
URL – Uniform Resource Locator
OTP – One Time Password
FY – Financial Year
UBC – Use Based Category

1. Introduction

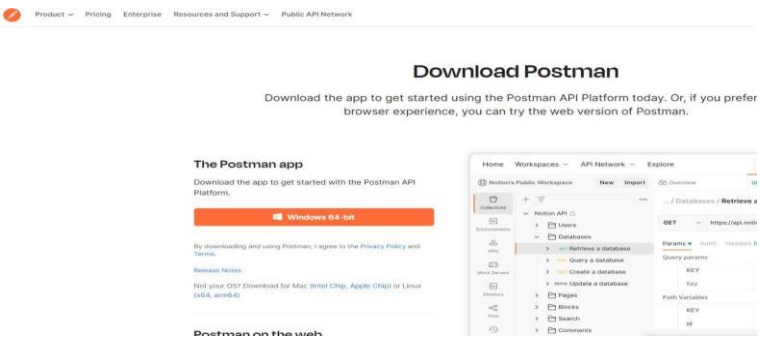

The IIP API platform helps you access Index of Industrial Production data released by the Ministry of Statistics and Programme Implementation. The manual explains how to use Postman to register, log in, and run API requests. You follow a simple flow, from creating an account to generating an access token and calling the endpoints.

The platform lets you pull annual and monthly index values, along with growth rates. You select parameters like financial year, category code, subcategory code, type, and output format. The API returns data in JSON or CSV.

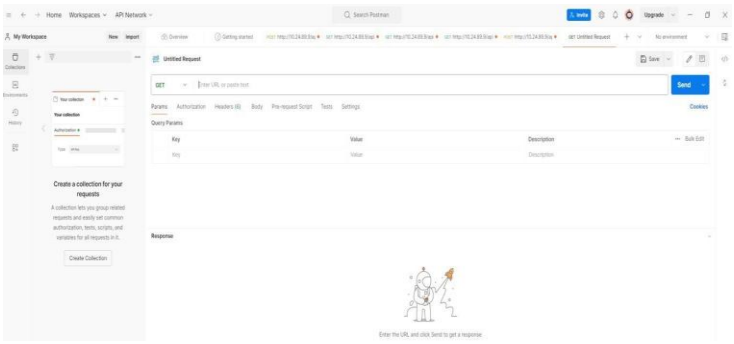

You use the same authentication process for all endpoints. After you generate the token, you add it in the headers and submit your request. The steps in the manual help you complete the setup and run the queries without errors.

1.1. Using Postman, the steps are mentioned below:

1.1.1. Download Postman from any web browser by visiting the link https://www.postman.com/downloads/

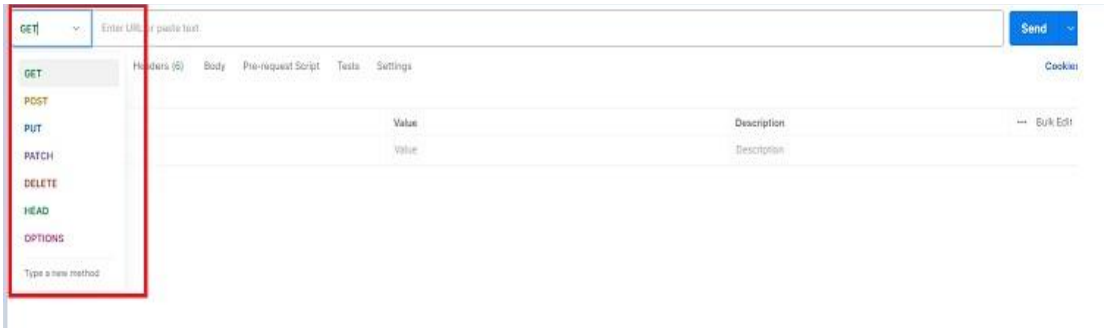

1.1.2. After downloading Postman app, open the app sign in or use the “lightweight API Client” and you will see the following menu:

1.1.3. Click the “+” button to add a request.

1.1.4. Expand the method button.

Note: The **Base URL** for accessing the API platform is: https://api.mospi.gov.in

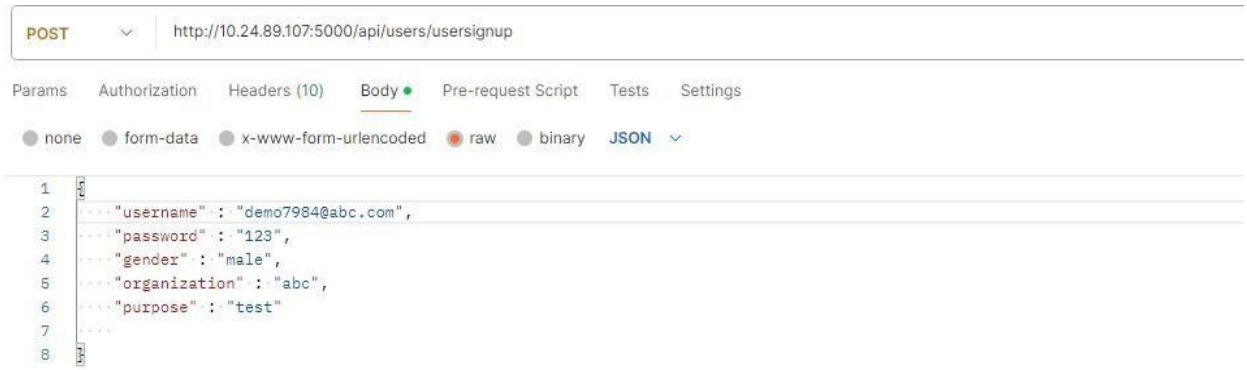

1.1.5. Use the signup API to register user for using the API platform, as described below:

1.1.5.1. Change the method to POST

1.1.5.2 Enter the **API *BASE URL*/api/users/user signup** in the textbox

1.1.5.3. Select Body, raw radio button and select JSON from the dropdown where JSON is shown by default as highlighted in Yellow below

1.1.5.4. Enter the data for the signup user details as shown below but make sure the username is unique and click Send.

1.1.5.5. A success message will be sent as the response of the API Indicating user signup is successful as shown above.

2. Login Process

2.1. The below steps describe the process to get the access token for the API through POSTMAN
2.2. Select “POST” and add the URL **http://Base_URL/api/users/login**

2.3. Select Body, raw radio button and select JSON from the dropdown where JSON is shown by default
2.4. Enter username and password as shown below using the same credentials used during signup process:

{

“username”:

“demo7984@abc.com”,

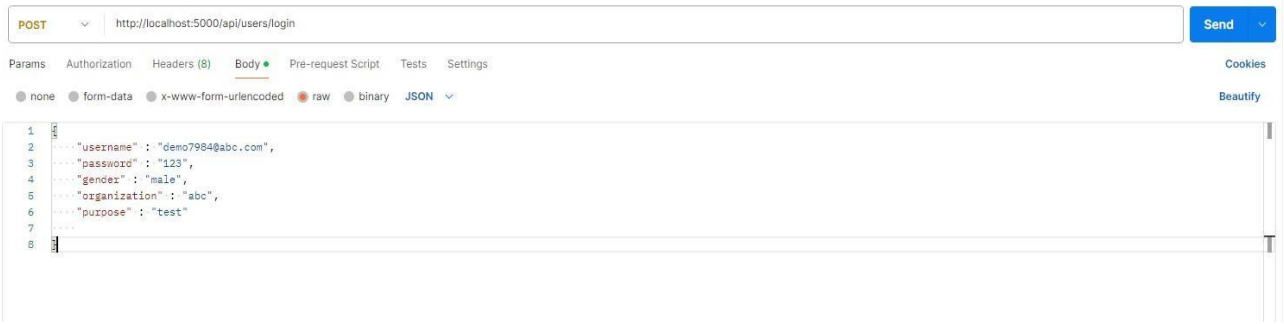

“password”: “123”,

“gender” : “male”,

“organization” : “abc”,

“purpose” : “test”

}

2.4. Click "Send".

2.6. Copy the "Token" value by clicking the "small double square" icon seen in the snapshot above.

2.7. Open a notepad and paste the value here. Copy only the value from the "token" element without the Quotes.

2.8. Use this token in the next sections for fetching the complete data from Postman only and NOT Swagger along with authorization credentials.

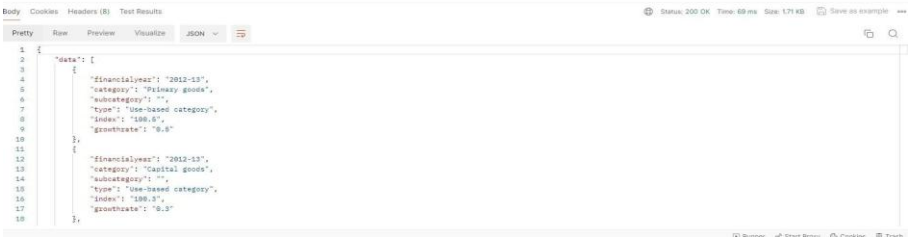

3. Accessing IIP Annual Index and Growth Rate

3.1. **Postman**: Following are the steps for the API execution through Postman tool: 3.1.1. The below steps describe the process to get the access token for the API through POSTMAN

3.1.1.1. Select "GET", enter the API **Base URL/api/iip/getIIPAnnual** in the URL field.

3.1.1.2. Fill the Authorization access token (refer Section 3.4 above to generate the token) and add it in the Headers tab. Please type "Authorization" under "Key" and enter the token under "Value" as shown below. Then click on Send:

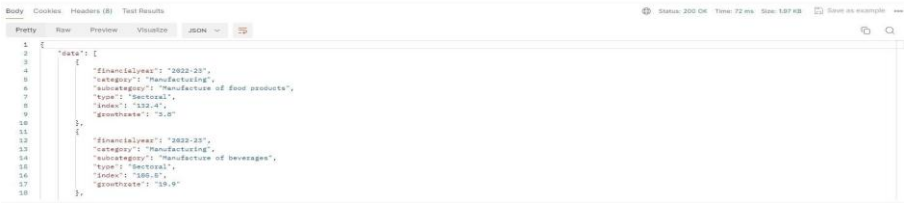

3.1.1.3. If no parameters are given then the complete data is fetched for the API as shown in the snapshot above .

3.1.1.4. Now keeping the Base URL and Authorization token intact enter the required parameters on Postman in the Params tab under "Query Params" with the parameters written below the "Key" and its corresponding values written below the "Values" as per the below screenshot. The data as per the query parameters is fetched in the **JSON/CSV** format. The following parameters and their corresponding values can be added to the api as is and is shown under:

Financial year (Format: YYYY-YY and if multiple financial years, then add value comma separated. Example: 2021-22, 2022- 23 etc.)
Category code (Format: 01-10 and if multiple Category codes, then enter values comma separated. Example: 02,03,04)
Subcategory code (Format: 02.10-02.32 and if multiple codes then enter comm separated. Example: 02.10,02.21 etc)
Type (Format: All, Use Based Category, Sectoral, General and if filtering data for multiple types, then values have to be comma separated. Example: All, Use Based Category, General etc) **Format** (JSON/CSV and the user can enter just one format
ONLY)
Check the screenshot below for response via a full REST query:

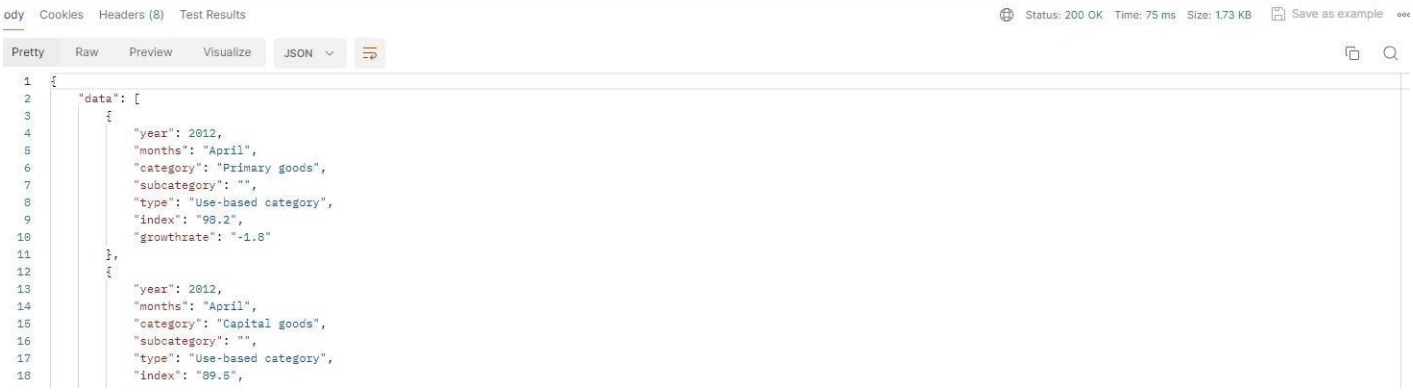

4. Accessing IIP Monthly Index and Growth Rate

4.1. **Postman**: Following are the steps for the API execution through the Postman tool:
4.1.1. Select “GET”, enter the API **Base URL/api/iip/getIIPMonthly** in the URL field.
4.1.2. Fill the Authorization access token (refer Section 2.4 above for the steps to generate the token) and add it in the Headers tab shown below and click Send:

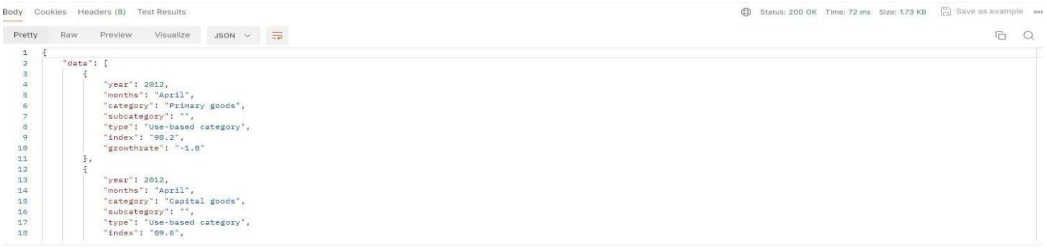

4.1.3. If no parameters are given then the complete data is fetched for the API shown above .

4.1.4. Enter the required parameters in the Params tab along with the authorization token and click Send. Now keeping the Base URI and Authorization token intact enter the required parameters in the Params tab under "**Query Params**" with the parameters written below the "**Key**" and its corresponding values written below the "**Values**" as per the below screenshot. The data as per the query parameters is fetched in the JSON/CSV format. The following parameters and their corresponding values can be added to the api as is and is shown under:

Year (Format: YYYY and if multiple financial years then add value comma separated. Example: 2021-22, 2022-23 etc.) **Month** (Format: 1-12 and if multiple financial years then add value comma separated. Example: 1,2,3,4 etc.) **Category code** (Format: 01-10 and if multiple Category codes then enter values comma separated. Example: 02,03,04) **Subcategory code** (Format: 02.10-02.32 and if multiple codes then enter comm separated. Example: 02.10,02.21 etc)
Type (Format: All, Use Based Category, Sectoral, General and if filtering data for multiple types then values have to be comma separated. Example: All, Use Based Category, General etc) **Format** (JSON/CSV and the user can enter just one format ONLY)

The screenshot below renders data based on filters populated in the params field:
